

# Curing Incurable Breast Cancer: The Future is Here

OCTOBER 31, 2018

Paul Okunieff, MD

Professor and Chair of  
the UF Department of  
Radiation Oncology

Dr. Okunieff's research includes development of a novel method to measure radiation-induced DNA fragments in the bloodstream to estimate radiation exposure, and the identification of molecules that provide genetically-based

protection against radiation hazards. He has active protocols to study the treatment of metastatic cancers with radiosurgery.

## Objectives

- To better understand how metastases form and why the dogma that there are either none or uncountable is wrong
- To learn how effective chemotherapy can help reduce the tumor burden so that there are only a few tumors left
- To be able to discuss how radiosurgery can effectively kill the "countable" tumor number

Understanding the metastases-formation process and the roles that chemotherapy and radiosurgery play in the reduction of tumor burden

**Location:** HealthStreet | **Time:** 12-1 p.m.  
2401 SW Archer Road

**Livestream via Zoom starts at 12:10 p.m.**

- online: <http://bit.ly/OCT31CC>
- or call: (646) 558-8656
  - Meeting ID: 282 014 328

Please bring your own lunch or RSVP to Barb Thomas at [bnbbarb@aol.com](mailto:bnbbarb@aol.com) for a healthful lunch provided with your \$4 contribution
